DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-22, drawn to a row driver and memory device, classified in class 365, subclass 230.06.
- II. Claims 23-25, drawn to a method of operating a memory device, classified in class 365, subclass 185.26.
- III. Claims 26-30, drawn to a method of operating a flash memory device, classified in class 365, subclass 185.23.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the method of operating a memory device, as claimed in the invention of Group II, can be practiced with another materially different product, such as another nonvolatile semiconductor memory device known in the art, other than the row driver and memory device as recited in Group I invention.

Inventions of Group I and Group III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that

product (MPEP § 806.05(h)). In the instant case, the method of operating a flash memory device, as claimed in the invention of Group III, can be practiced with another materially different product, such as another nonvolatile semiconductor memory device known in the art, other than the row driver and memory device as recited in Group I invention.

Inventions of Group II and Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions recite distinct methods of operating a memory device. That is, the method of operating a memory device of Group II invention comprises detecting a mode of operation, and floating at least some of the wordlines. On the other hand, the method of operating a flash memory device of Group III invention calls for detecting an active mode and a standby mode of operation, and correspondingly applying a first and second voltage to each of the wordlines or isolating at least some of the wordlines.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
